

The Ropox height adjustable shower/changing bed has been expertly designed for people with limited mobility. The bed provides a safe and stable platform for showering and changing.

The height of the bed is easily adjusted using an electrical hand control. The lowest position allows the user to access the bed comfortably and safely. The caregiver can then raise the bed to a suitable height, enabling healthy working conditions. When the bed is not in use, it can be folded up against the wall, maximising the space in the room.

The soft, smooth double-sided slats enable the bed to be dual-purpose. One side of the slats curve slightly downwards in the middle, providing a safe, comfortable and natural position for the user whilst showering. The other side of the slats curve slightly upwards in the middle, making it easier for the caregiver to turn the user onto their side when using the bed for changing. The removable slats and water collection tray are smooth with rounded corners to enable easy cleaning. This ensures a high standard of hygiene is maintained.

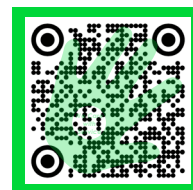

The Ropox shower/changing bed is available in three different sizes and can accommodate a user weighing up to 220kg.

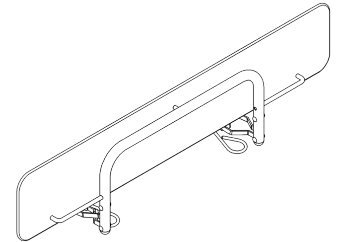

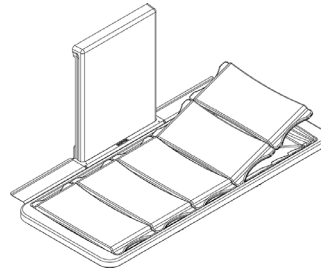

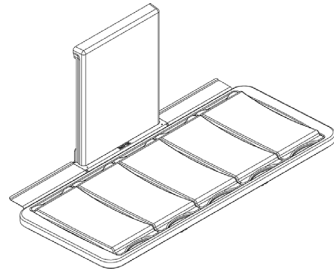

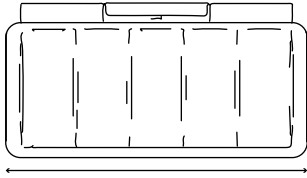

Additional accessories are available on request, including foldable safety rails, a back support and a headrest, allowing for a tailored package to suit individual needs.

Please enquire for optional 5 and 10 year service warranties available.
